	Purchase of new Passenger Boarding Bridge	The existing Passenger Boarding Bridges (PBB) has been in operation since 2003. At present, the equipment showed signs of normal wear and tear. Further, due to its age, the equipment is par below its operational efficiency. Some of its electronic components has already been repaired and replaced. Some of its electrical and mechanical connections were either grounded or highly resistive. Total replacement for new PBB's is highly recommended in order to address not only issues on safety but also for the convenience of the flying public.
